

Commercial Case Study

PROJECT BACKGROUND – BERMONDSEY SPA, SOUTHWARK

Project Background

Bermondsey Spa is a transformation of a neglected corner of south London into one with well designed homes, streets, spaces, and places for the local community. Located in Southwark, close to Tower Bridge and Bermondsey Underground station. 2,000 new homes, 40% of which are affordable housing, have been created. 16 GP surgeries in two new health centres, a NHS dental practice, pharmacy, youth, and play facilities, 2.5 hectares of re-landscaped open space, bicycle parks, council offices and a One Stop Shop, shops, including a food retail store, and offices for the Southwark Primary Care Trust have been constructed.

Cellecta's **YELOfon HD10+** was specified by **Levitt Bernstein** for this development for its acclaimed resilient layer which isolates floating screed from the structural concrete floor. **YELOfon HD10+** has superior impact sound deadening properties, is light weight and is easy to handle and install.

Hyde Group was awarded this 25,000m² contract to construct this development in one of the most vibrant places to live in London.
