INNOVATION IN INSULATION

Residential Case Study

PROJECT BACKGROUND – LITTLE WINDRUSH, OXFORDSHIRE

Project Background

Little Windrush was an abandoned hotel beside the A40 which has been redeveloped into new community of homes, a farm shop and restaurant. The development consists of two stages, the first stage includes the creation of 8 cottages and the second stage involves extensively renovating and refurbishing the hotel into 24 luxury flats. These apartments, located within an area of outstanding natural beauty at the centre of the Cotswold, will have views over Windrush Valley.

Cellecta's **ScreedBoard 28** was specified by **coombes:everitt architects** due to it being an award winning composite acoustic overlay treatment, featuring interlocking edges for installation convenience. Its high density and unique resilient layer provide unrivalled acoustic performance, typically 5dB better than legislative requirements.

Westfields Homes was awarded this 4,000m² contract to construct this regeneration in Oxfordshire.
