

# Commercial Case Study

## PROJECT BACKGROUND – CARDIFF CITY FC, LECKWITH ROAD

### Project Background

Cardiff City Football Club has expanded into the new east Stand extension at Cardiff City Stadium. The expansion added a further 5000 seats to the stadium's capacity followed by the addition of another 2,500 to 3,000 seats at each of the ends, raising capacity to a total of 38,000 seats, it also includes new corporate hospitality facilities. The stand is said to include plans for a concourse area on either side with a plush corporate area and catering facilities incorporated in the centre.

Collecta's **HEXTATHERM XFLOOR 500** has been specified by **Arup** due to its high compressive strength insulation boards that were used under a concrete slab to comply with part L Building regulations.

**Lang O'Rourke** was awarded this 350m<sup>2</sup> contract to construct this expansion.
