

# Residential Case Study

## PROJECT BACKGROUND – HURRICANE COURT, SLOUGH

### Project Background

Hurricane Court is a conversion of offices into 84 one and two bedroom contemporary apartments and studios. The name is derived from the Hawker Hurricane aircraft manufactured here in the 1940's. Within five miles of Heathrow, this development is the first ever courtyard scheme and residential private balcony terraces in Langley. By developing a gated residential space, this project becomes a microcosm, a community within the already idyllic community of Langley.

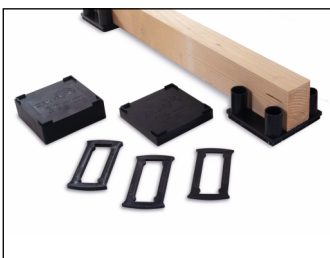

Cellecta's **RUBBERfon Cradles** were specified by **p-ad** due to them being Robust Detail FFT2 compliant and allowing easy integration of an underfloor heating system. **RUBBERfon Cradles** utilise incremental high impact plastic packers and elevation blocks to level an uneven structural floor quickly and easily. Softwood battens are then used to support the floor decking board.

**Nacropolis Group** was supplied 2,500m<sup>2</sup> of Cellecta products to develop these apartments in the village of Langley in Berkshire.
