

Residential Case Study

PROJECT BACKGROUND – SPRING BOROUGHS, NORTHAMPTON

Project Background

Spring Boroughs is a development of 34 new affordable homes, comprising of 2 and 3 bed houses and a retail unit. Originally a scheme comprising of 18 homes off Little Cross Street, this development went under a full review to secure more sites and increase the development, including the relocation of a retail unit. Significant social value was created as part of the development, as it provided the community with much needed affordable housing.

Collecta's **ScreedBoard 28** was specified by **Northampton Partnership Homes** due to the high sound reduction performance and low floor levels. As it's suitable for all floor types, it is frequently viewed as the solution of choice for new build and refurbishment developments. Its interlocking edges for installation convenience, high density, and unique resilient layer provides unrivalled acoustic performance.

Willmott Dixon was supplied 600m² of Collecta products to develop these flats in Northampton.
